

## About Us

WB Electric, Incorporated is an Electrical Contracting company located in the beautiful town of Jim Thorpe in Eastern Pennsylvania; Serving Carbon County, Monroe County, Lehigh Valley and the surrounding areas. We provide the Commercial, Residential, Institutional and Industrial industries with: electrical, lighting design and installation, generator systems, industrial motor control and automation, lighting control, stage lighting, IT services, voice/data/video networks, and maintenance. We are also, a leader in designing, implementing, and servicing renewable energy products including Solar Electric, Solar Thermal, Wind systems, and Electric Vehicle charging solutions.

Come see our installed solar thermal heating system at the Kettle Hill Professional building – we practice what we preach!

WB Electric was founded by Walter Bevilacqua, a licensed electrical contractor with more than 25 years of experience in the industry. Walt grew up around construction sites as his father and uncle were masons and his grandfather was a carpenter and cabinet maker. He has always loved seeing a set of drawings evolve from a project to a structure and finally to a family home or business.

Today, he is one of the most successful electrical contractors in Northeastern PA, with a client list including Penn's Peak, The Times News, Franklin Hill Winery, Tractor Supply Company, Braden Airpark (Lehigh Valley International Airport), Martin Guitars, and some of the largest homebuilders operating in the Poconos. His company offers residential and commercial electrical contracting, sustainable energy consulting, sales and installation for both solar energy systems and wind power.

# Reliable Power

## STAND-BY GENERATOR SYSTEMS FROM GENERAC AND BRIGSS AND STRATTON

Today, with more pressure than ever on our national grid, it is more important than ever to have a power source that is reliable, affordable, and capable of handling the loads of your business and your home. A Stand-by generator system ensures you have the power you need when you need it. An automatic switch makes keeps the transition from grid power to generated power seamless.

## VERTICAL AXIS WIND TURBINES - ELECTRICITY.

New wind technologies have resulted in turbines that require a smaller footprint, create less noise (30dB@30ft), and fit into urban environments where zoning restricts the installation of larger more traditional horizontal turbines (windmills).

## CUSTOM SERVICE PLANS

We recognize that your business operates more than just 8 to 5. We also recognize that every business has unique needs that require customized service solutions. Whether its normal electric repair, service upgrades, or emergency requests, we will be there when you need us there.

## ELECTRIC VEHICLE CHARGING STATIONS

- NISSAN LEAF/BMW AEROVIRONMENT
- FORD FOCUS LEVITON
- CHEVROLET VOLT SPX/COULOMB TECHNOLOGIES
- GE WATTSTATION
- LEVEL 2 AND LEVEL 3 CHARGERS
- IN YOUR HOME, AT YOUR BUSINESS, IN YOUR COMMUNITY

## PHOTOVOLTAIC SOLAR - ELECTRICITY

Leverage the power of the sun to produce electricity all day long. Mount them on your roof or on the ground. Federal tax incentives and the addition of an electric vehicle will reduce your ROI to favorable terms.

## SOLAR THERMAL - HEATING and HOT WATER

Keep your facilities at a constant temperature all year long and save money on heating bills by using the sun's ultra violet rays to heat your water and your environment.

## PAY YOUR BILL ONLINE

Use our Pay Now process to pay your invoice online.

## SECURITY SYSTEMS - CAMERAS/ALARMS

Keep your facilities safe and secure with alarm systems and cameras. Monitor your critical investments from your home, your office, or while you are on the road.

## SERVICE REQUESTS ON THE WEB

Use your PC, MAC, Ipad, or Smartphone to place service calls when you need them. You tell us when you want us there. Just click on the iService button and tell us what you need and when you want us there.
